

JAISON K SEBASTIAN

.NET Backend Developer | SQL Server | Enterprise Applications

✉ officialjaisonksebastian1999@gmail.com 📞 8925813531 📍 New Delhi, India

PROFESSIONAL SUMMARY

Backend-focused **.NET Developer** with **3.6+ years of experience** in designing and developing **enterprise-grade backend systems, manufacturing execution system (MES) integrations, and data-driven applications**. Strong expertise in **.NET Core, C#, SQL Server, Entity Framework, and RESTful API development**. Proven ability to build **secure, scalable, and high-performance backend services**, manage **complex databases**, and optimize **data processing workflows**. Experienced in **manufacturing data systems, RFID integrations, and production analytics**.

TECHNICAL SKILLS

Backend Development

.NET Core, .NET Framework, C#, Entity Framework, REST APIs, MVC Architecture

Manufacturing & Systems

MES Systems, RFID Integration, Manufacturing Data Processing, Production Data Analysis

Database

SQL Server, Database Design, Query Optimization, Stored Procedures, Data Migration

Development & Tools

Git, GitHub, Visual Studio, Postman, ServiceNow

PROFESSIONAL EXPERIENCE

Software Engineer - Manufacturing IND 09/2022 – Present | Chennai
First Solar INC. (FS India Solar Ventures Private Ltd.)

- Developed and maintained **.NET Core MVC** backend applications using **C#** and **SQL Server** for **manufacturing data reporting, audit compliance, and efficiency tracking**.
- Designed and implemented **RESTful APIs** to integrate **Manufacturing Execution Systems (MES)** with backend services, ensuring **real-time data accuracy** and **high system reliability**.
- Managed and optimized **SQL Server databases**, including **data migration, query tuning, and schema design**, improving **data performance** and **availability**.
- Acted as **Data Custodian**, ensuring **data integrity, consistency, and secure accessibility** for **analytics** and **business reporting**.
- Built a **.NET Core MVC reporting system** for tracking **solar module efficiency**, streamlining **reporting workflows** and supporting **government audit compliance**.

EDUCATION

Bachelor of Computer Applications (BCA), 01/2019 – 11/2022
Himalayan Garhwal University

PROJECTS

Project: Daily Consumption Reporting (DCR) Portal

Tech Stack: .NET Core API, C#, SQL Server, REST APIs, MES/ERP Integration, RBAC (Role-Based Access Control)

Overview

Developed an end-to-end **Daily Consumption Reporting (DCR) Portal** to digitalize and streamline **material consumption tracking, validation, and reporting** across manufacturing production lines. The system improved **data accuracy**, reduced **manual intervention**, and enabled **real-time visibility** into production consumption and variance analysis.

Roles & Responsibilities

- Designed and developed **RESTful APIs** using **.NET Core** to handle **data submission, validation logic, and approval workflows** for daily consumption processes.
- Implemented complex **business validation rules**, including **UoM checks, BOM-level validation, and variance threshold checks** to ensure **data accuracy** and **process compliance**.
- Designed and optimized **SQL Server database schemas** for **consumption transactions, shift-level summaries, BOM references, and audit logs**, ensuring **high data integrity** and **traceability**.
- Integrated backend services with **MES/ERP systems** to compare **actual consumption vs. standard BOM**, enabling **deviation detection** and reducing **material loss**.
- Developed and enforced **role-based access control (RBAC)** and **multi-level approval workflows** for **supervisors, quality teams, and production managers**.
- Implemented **audit logging mechanisms** to track **data changes, user actions**, and ensure **compliance** with manufacturing standards.
- Optimized backend performance through **efficient query design, data indexing, and scalable API architecture**.
- Enabled **real-time data processing** to support **reporting systems** and improve **decision-making** across production units.

Project: Manufacturing Reporting & RFID Tracking System

Tech Stack: .NET Core MVC, C#, SQL Server, REST APIs, MES Integration, RFID Data Processing

Overview

Developed a backend-driven system for **manufacturing reporting** and **RFID-based tracking**, enabling real-time visibility into production processes. The solution improved **traceability**, reduced **manual tracking efforts**, and ensured **accurate production data flow** across systems.

Roles & Responsibilities

- Designed and developed backend services using **.NET Core MVC** to process and expose **MES production data** through secure **RESTful APIs**.
- Implemented **RFID data processing logic** to track manufacturing units, improving **traceability** and reducing **manual intervention**.
- Designed and maintained **SQL Server databases** for storing **RFID data** and **production records**, ensuring **high data accuracy** and **efficient data retrieval**.
- Integrated backend services with **Manufacturing Execution Systems (MES)** to enable **real-time data synchronization** and reporting.
- Optimized backend workflows for **real-time data processing**, improving **system performance** and **reliability**.
